

SAP Concur Integration

At mySupply, we are specialists when it comes to developing software integrations. Whether you are looking for a simple or advanced solution, we can contribute with our expertise to resolve the issue.

“... from the start, we were on the same page about what the issue was, and what was needed for it to be solved. There has not been any problems with the collaboration, but naturally when new software is installed, there has occurred plenty of smaller hiccups, which have been handled well and professionally, and we have gotten both good counselling and good solutions in the process.”

Integrate electronic invoices in SAP Concur with an innovative and time efficient tool

Travels, expenses and invoices can be collected and administrated in SAP Concur. mySupply's integration can process invoices and credit notes of different formats, which have been received through the NemHandel and Peppol infrastructures.

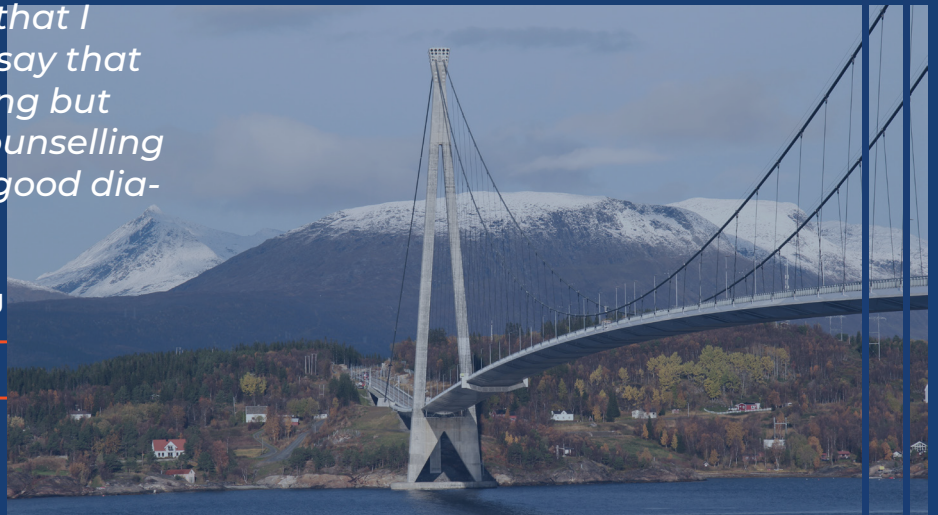

All businesses are unique and therefore often require individual solutions. At mySupply, we are specialists at developing solutions that fit your business' needs, and this was also the case in our collaboration with COWI.

As part of exchanging their invoice approval system for SAP Concur, COWI needed a partner that could build new interfaces. With a recommendation from SAP Concur, the collaboration began.

"We have communicated on several levels, and I'm sure that I speak for everyone, when I say that we have experienced nothing but goodwill and competent counselling and that there has been a good dialogue."
