

Amgros I/S

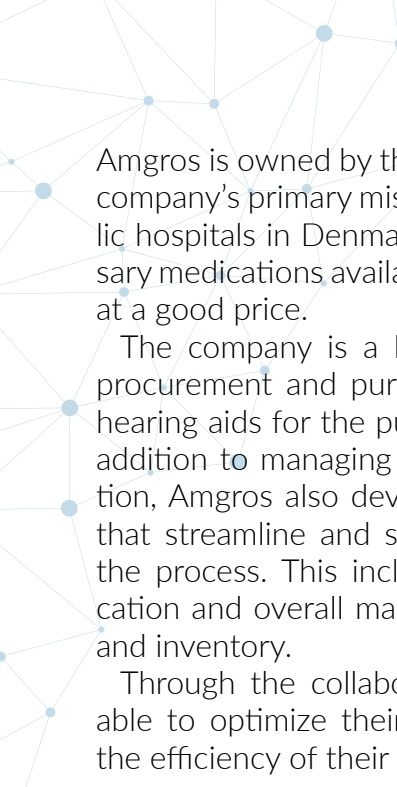

Amgros has taken significant steps towards reliable and efficient document management using VAX Validator. The solution provides Amgros with company-specific document validation and an additional control that enhances their workflow processes.

The quality assurance of electronic documents is top-notch with VAX Validator. With our company-specific validation, we have the assurance that the invoice contains the information required by our own business rules. Consequently, we intercept invalid documents before they enter the system, and an automatic return message is sent to the hearing clinic, shifting error handling back to the respective clinic. We have gained control over the invoices we receive.

– Director, Finance and Management Support, Anette Dyhrberg

Amgros is owned by the five Danish regions. The company's primary mission is to ensure that public hospitals in Denmark always have the necessary medications available – and always procured at a good price.

The company is a leader in Denmark in the procurement and purchase of medications and hearing aids for the public healthcare system. In addition to managing procurement and acquisition, Amgros also develops complex IT systems that streamline and simplify various aspects of the process. This includes improved communication and overall management of procurement and inventory.

Through the collaboration, Amgros has been able to optimize their operations and enhance the efficiency of their supply chain processes.

VAX Validator Correct Errors

Amgros faced the challenge that the regions were imposing business requirements on hearing clinics regarding stricter invoicing content requirements.

Therefore, Amgros implemented the VAX Validator solution, which is a comprehensive document firewall tailored to their specific needs. The solution ensures that all incoming documents comply with predefined rules that companies have mapped out. This helps minimize the risk of errors, inconsistencies, and unauthorized access to important information.

The solution provides the company with an additional level of control that effectively complements existing processes. The solution enables structured and automatic validation of documents before non-compliant documents are forwarded in the document workflow. This ensures accuracy, completeness, and provides a better data foundation. With VAX Validator, Amgros is confident that their documents are accurate and meet all predefined requirements.

We simplify the complexity

Next-generation Process Optimization

the solution represents a new generation of process optimization and includes a restrictive validation that takes into account the above-mentioned requirements.

In case of errors during the restrictive validation, an application receipt is generated, describing the cause of the error. This is automatically sent to the sending hearing clinic. The rejected documents will be visible in the VAX Validator user interface, making it possible to see the reason for the rejection.

Trust in Documents

VAX Validator has become an indispensable part of Amgros' document management workflow. With the solution, the company achieves increased efficiency, a higher level of data security, and greater trust in their documents. The implementation of a company-specific validation has strengthened Amgros' workflow and improved their overall work processes.

FAKTA

VAX Validator

- Ensure compliance with predefined rules and minimize the risk of errors.
- Automatic document validation for accuracy and completeness.
- Automatically generated application receipt in case of errors.
- Rejected documents are visible in the user interface.
- Enhanced work processes, freeing up time for other tasks.
- Increased efficiency, higher data security, and greater trust in documents.
