

VAX 360

The future digital platform for the exchange and processing of electronic documents and services across systems, businesses, and organizations. Throughout the process, the solution provides you with insights and ensures maximum automation through quality assurance of all data.

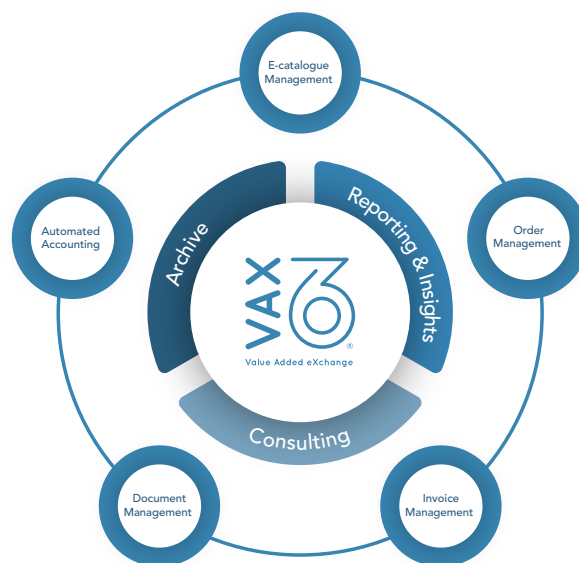

VAX 360 - brief

VAX 360 is a comprehensive solution used for the processing and exchange of electronic documents, integrations, and services. It supports both national and international communication standards and is capable of handling a wide range of electronic document standards.

The solution includes well-known standards such as Danish OIOUBL, Norwegian EHF, Swedish SveFaktura, Finnish TeappsXML, and Finvoice, as well as EU's Peppol BIS standard and several EDI standards and other formats. This enables companies to communicate effectively with partners and customers across borders.

In addition to supporting standards, VAX 360 can also handle multiple system standards, allowing companies to integrate their existing systems and workflows, achieving a more streamlined and efficient operation.

VAX 360 is also fully integrated with VAX services, enabling secure and efficient electronic document exchange across businesses and countries.

Handling

Efficient handling of electronic documents, files, and data with a comprehensive solution

Conversion

Conversion between a wide range of document formats, allowing you to send and receive in the formats you prefer

Overview

Gain easy overview of sent and received documents and transactions

Efficient Management - infinite Possibilities

VAX 360 supports all common document standards, allowing you to send and receive in your preferred formats. We ensure that all documents are validated and processed in accordance with formal requirements. With a document firewall, you receive additional company-specific validation of documents from external parties. If a document is rejected, our system automatically sends a return message indicating the rejection reason.

The solution integrates with NemHandel, Peppol, and VANS networks, allowing you to exchange documents where you do business. The solution can convert between different document formats, whether they are standard formats or proprietary formats.

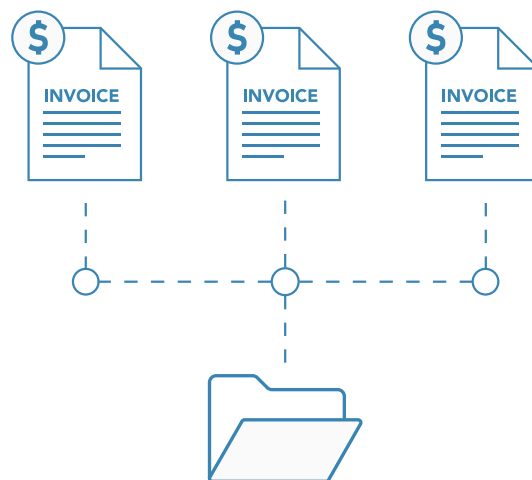

VAX 360 allows for the embedding of attachments, so you can exchange all types of attachments and non-standardized documents.

We understand that electronic document reception doesn't always go smoothly, which is why we offer a printing solution to ensure that documents are printed and sent to the relevant recipients.

To ensure full control and traceability, we provide comprehensive document history and transaction tracking for all your documents. It can also be embedded in a built-in document archive, allowing you to access it directly via web service from backend systems. This facilitates quick and easy document retrieval and management.

The solution sends status messages containing important information about the processing and exchange status of documents. These messages can be integrated directly into your backend systems.

If processing or communication errors occur, our system automatically takes care of resending documents, preventing the loss of important data.

Simple setup - with great returns

The benefits of VAX 360 are significant and interconnect across your organization and systems

- Increased data quality
- Secure and fast document exchange
- Transparent document exchange
- Automated document processing
- Reduced paper consumption

Global

With one platform, you can reach all your connections

Compliance

Ensures that your documents comply with all applicable laws and standards

Integration

Easily and directly integrates with any system

Cloud

Cloud-based solution that ensures flexibility and efficiency
